

James Cordray

POSITION: Senior Internet Technology Advisor

EMAIL: jamesc@totalweb-inc.com

LOCATION: Nashville TN

ABOUT:

I guess you can call me a workaholic, after High School I moved to Houston Texas where I attended a small Jr. College working my way to an engineer degree in electrical. After getting through the toughest parts I dropped out and worked full time o?n supporting my family. With an associate degree in industrial electrical applications and instrumentation I kept going back to school to stay o?n top of my field by taking classes in fiber optics, Foxborough control system programming, PLC and DCS system programming and Industrial Communications.

This is where I got my first taste of what computers were really all about. Through out the years I have always “fooled” around with stuff like CGI, Perl, Java and whatever else went? with web development. I really got hooked o?n Microsoft Front Page. It seemed to save me from having to do so much work.

About 5 years ago I started looking into server applications such as Apache and IIS. There have been a few others but these are the o?nes I was most interested in. Now I spend my time learning all I can about Linux and Apache they seem to be able to do just about anything we need for our businesses.

Abilities:

Graphic design and applications

Adobe Photoshop v6.x

Paintshop Pro v7

Swish Animation

Microsoft FrontPage

Dreamweaver UltraDev

Microsoft Office

Adobe Acrobat

Web development

JavaScript

CGI Scripting

PHP

HTML

NETWORKING AND INTERNET PROTOCOLS:

TCP/IP (Server administration knowledge of this technology.)

FTP / HTTP as used in today’s internet services

At present adding to this repertoire various programming languages and operating systems including:

CGI

PHP

Perl

Microsoft Windows all versions to XP (beyond the basics)

Linux

Things to learn in the future:

ASP

Visual Basic

Python

TCL/TK
